## Wire suspension kit. Max. 15 kg.

A complete package solution for wire suspension for all types of ceilings.

1. For suspension from sheet metal, plaster and other such ceiling materials. Drill a 5 mm hole through the material. Thread the wire through the relief washer and then pass the wire with washer through the 5 mm hole.
2. For suspension around ventilation pipes or beams. Thread the wire through the relief washer, around the pipe or beam and then once again through the relief washer.
3. For suspension from a visible ceiling grid. Screw in the cylindrical part with the internal thread. Thread the wire through the cup and then screw it together with the ceiling attachment.
4. Quick release wire lock. Thread the wire through the wire lock (see the arrow in the picture). The height is adjusted automatically. In order to lower, press down the pin on the wire lock and adjust. The wire lock is accompanied by an M4 screw with washer for fastening.
